## RESTORATION: Products for the preparation of cleaners

### REAGENTS

#### Information sheet

#### DESCRIPTION AND FIELDS OF APPLICATION

Chemical reagents for the preparation of cleaners for stone.

#### CITRIC ACID 20%

A 20% aqueous solution for cleaning mortar residues, salt efflorescence, lime (slaked) products.

#### BENZALKONIUM CHLORIDE 50%

50% aqueous solution of quaternary ammonium salt; after appropriate dilution, diluted solutions are used in broad-spectrum disinfectant treatment of microorganisms fungi, yeasts, gram- gram+ bacteria, algae, on wall and stone substrates of various kinds.

#### USE

Since these are products used in the preparation of detergents and cleaners, choice, use, and verification of performance must be evaluated by the user according to his knowledge and experience. In general, follow the indications given in the safety data sheets, observing criteria of hygiene and prevention when handling chemicals.

VERSION 18/12 Product for professional use.  
The user must assess whether the product is suitable for use in terms of type and method of use, on which the final performance depends.  
This sheet replaces and cancels the previous ones
